## Microsoft Azure Operations

ATEA's Azure Operations Service provides full management support for resources that are planned or are already deployed in Microsoft Azure. Upon request, ATEA will perform administrative activities and IMACDs (Install, Move, Add, Change, Delete) on the Azure services and objects in scope of operations.

As Microsoft Azure environment possibilities and business needs evolve over time, it is important to optimize the Microsoft Azure environment and the services delivered through it. ATEA will as part of the Microsoft Azure Operations service suggest and implement continual service improvement initiatives based on end-user reports and technical analysis.

### Included in the service is

- Management of Azure Virtual Networks
  - Standalone, Point-to-Site connectivity, Site-to-Site connectivity, Network Security Groups etc.
- Management of Azure Active Directory incl. Premium AD
  - Users & Groups, MFA for Users, Application Proxy, Account Recovery Routines & Rules, Access to discovered and published applications etc.
- Management of Azure Storage
  - Storage Account Management, Management of Blobs & File Storage, Backup & Restore Operations etc.
- Management of Azure Virtual Machines
  - Lifecycle of virtual machines, configure role based access, availability sets, virtual machine size, ACLs, IP addresses, caching, encryption etc.
- Management of Azure Web Apps Platform
  - RBAC, WebApp settings, App Service Plan configuration, deployment of required Azure resources, Web App backup & restore etc.
- Management of Azure SQL Databases Platform
  - Deployment of Azure SQL databases, RBAC, firewall settings, database pricing tiers, elastic database pools, copy/backup/restore etc.
- Service Request Fulfillment
- Management of Desired Configurations
- Continuous Service Improvement

### ATEA AZURE EXPERT CENTER

We serve as Single-Point-of-Contact (SPOC) for all your Microsoft Azure needs. We know Azure and cover all 50+ Azure services with our 25+ Azure experts. We have more than 7 years of experience working with Azure. We help our customers moving their applications to the cloud. We have DevOps expertise and cover both on premise, hybrid and public cloud.
