

ATEA CLOUD SECURITY

With Azure Security Center

Security management and advanced threat protection across hybrid cloud workloads!

WHAT IS ATEA CLOUD SECURITY?

Atea Cloud Security is an alert monitoring and resolution service for Windows and Linux virtual machines, Web Apps, containers, SQL databases and storage.

FIN AND FIX VULNERABILITIES BEFORE THEY CAN BE EXPLOITED:

- System updates
- Antimalware protection
- Intrusion Prevention/EDR
- Data encryption

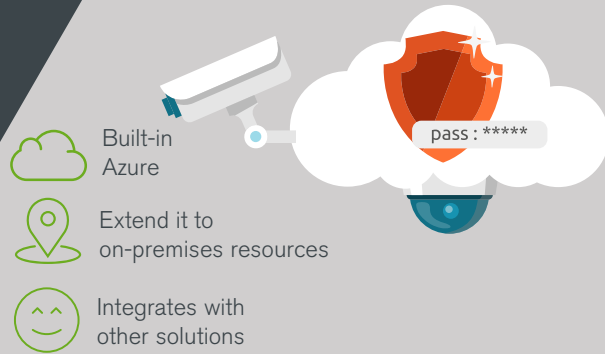

ADVANCED ANALYTICS AND THREAT INTELLIGENCE TO DETECT ATTACKS:

- Application Control/Whitelisting
- Compliance Baseline monitoring
- Network segmentation and Protections

THOROUGH INVESTIGATION FOR RAPID THREAT RESPONSE:

- Hardening, configuration & vulnerability management
- Access control & log management
- Automation & orchestration

WHY YOU WILL LOVE IT!

Unified security management!

REDUCE EXPOSURE SURFACE:

The **first step** to avoid a security incident is to **lower possible attack surface** to the minimum. Implementing **industry best practice security policies will significantly reduce** the possibility for a malicious software or script to execute while monitoring will ensure safety.

SECURING THE USERS:

81% of security incidents come from **compromised user credentials**. Identity Protection together with Just in Time Virtual Machine Remote Access will enable **access for the right users** only for the time of maintenance.

KEY FEATURES

Why customers use our service

Get visibility and control over Azure workloads

Protect your organization against rapidly evolving threats

Reduce management complexity

Stop an incident in progress as it happens
