# AZURE CLOUD JOURNEYS COST OPTIMIZATION & CONTROL

## PAY ONLY FOR WHAT YOU USE

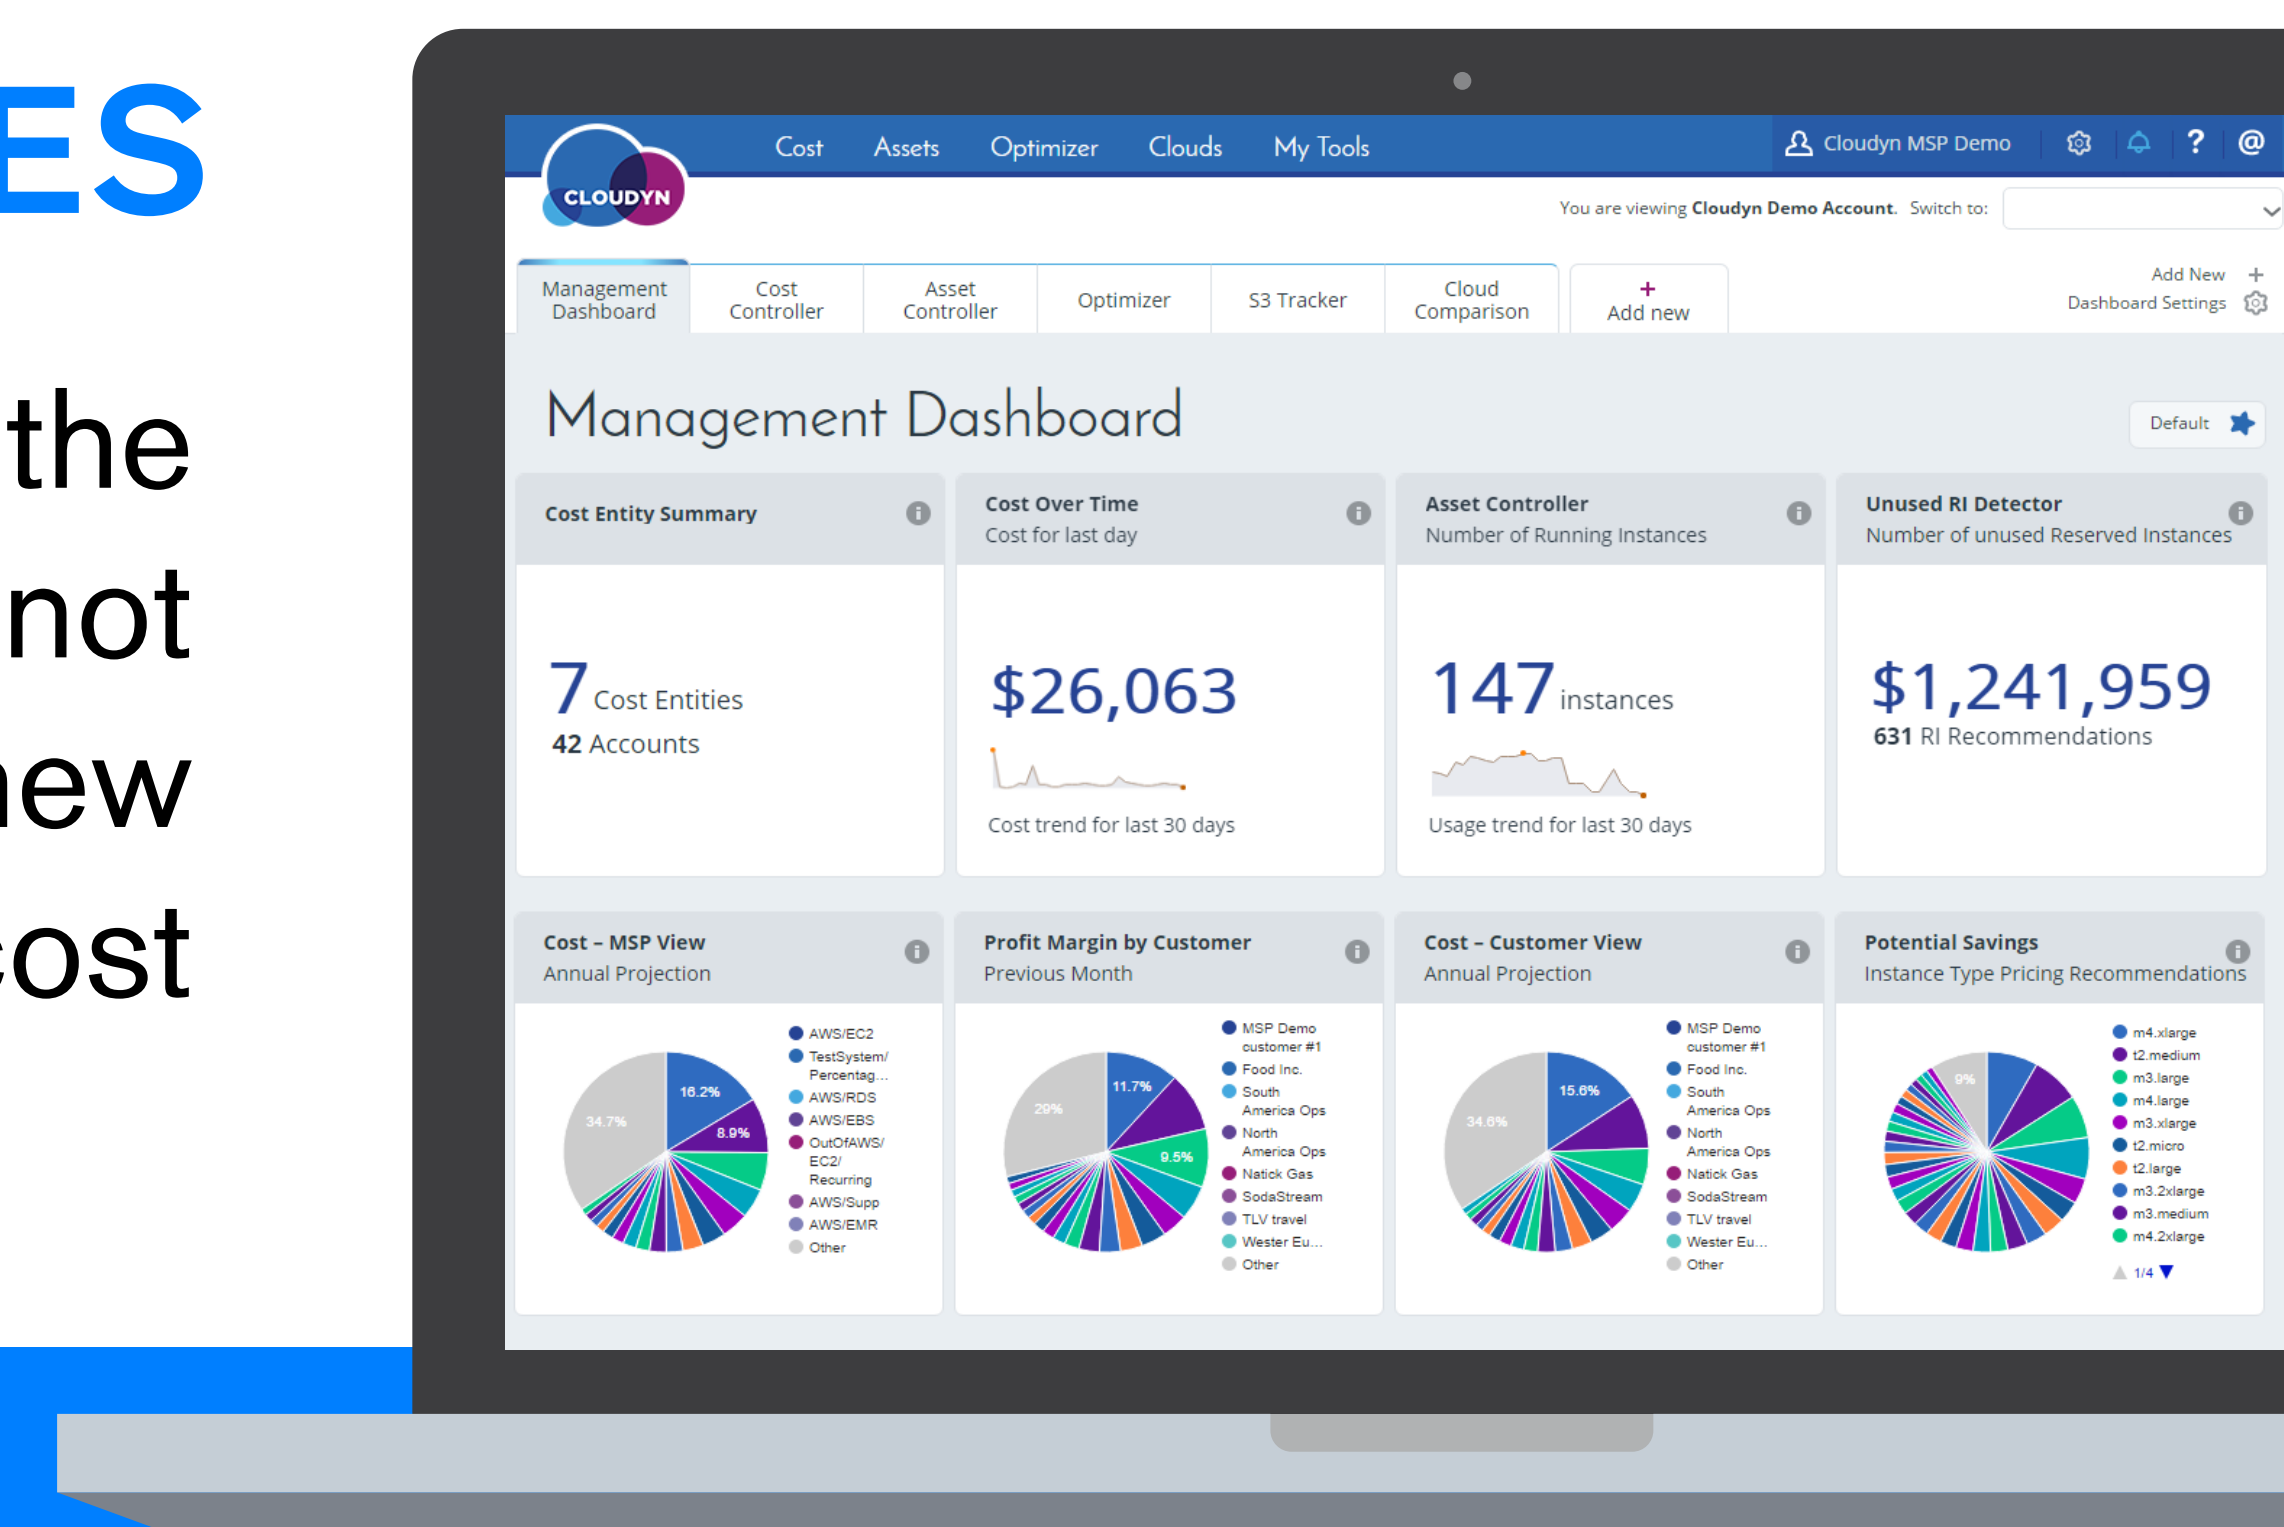

Cloud bring the benefits of consumption based pricing

However, understanding costs in the cloud is not one of the easiest disciplines. It can differ a lot from on premises cost calculations and management habits which might have a negative influence on your total experience and the final bill.

**Atea Cloud Control and Optimization Journey has been designed specifically for getting your teams familiar with cloud cost models. And going further towards controlling aspects of costs and finally - optimization.**

## ADVANCED MANAGEMENT OF CLOUD RESOURCES

Cost control provides advanced management of cloud resources from the finance perspective so your organization can make sure that it's not paying for over utilized servers and other services. Getting a new perspective from a budget related overview is important as well as a cost threshold notification from your custom dashboards.

## OPTIMIZATION BASED ON DATA FROM COST CONTROL

It's not limited to right sizing and usage pattern but includes guides towards architecture changes at a variety of stages towards benefits coming from using cloud services, micro-service based architecture and platform solutions.

## AFTER THE CLOUD CONTROL AND OPTIMIZATION JOURNEY, YOUR ORGANIZATION WILL HAVE SKILLS LIKE

*Understanding of bills and costs of resources*

*Controlling utilization and spending in a consumption based world*

*Optimizing cost and development or management practices through cloud native services and architecture*
